

Cleaning

- You can just rinse off pollen, sand, and dust with some water (from a hose or watering can).
- For stubborn dirt, use a lint-free cloth or a soft sponge with plenty of water and a light touch.
- To get rid of really tough grime, use warm water and a bit of regular dish soap.

Stuff you should avoid:

- Don't rub your SunForm dry.
- Don't use any abrasive cleaners.
- Glass cleaners, solvents, and alcohol can damage the surface.
- Don't use a pressure washer.

Safety warnings

SunForms aren't toys and aren't suitable for kids under 3.
The mounting kit might contain small parts - **choking hazard**.

If you use brute force (like bending it too much or hitting it hard), the plastic discs might break or splinter. Broken edges can be sharp or pointy and might cause cuts or stabs if you're not careful.

In that case, please wear proper gear (like safety goggles and gloves).

What's in the box

- 1x Cannabis Leaf
- 1x Flexible fiberglass swing rod
- 1x Assembly guide
- 1x Mounting kit

General tips

- SunForms are generally winter-proof and can handle temperatures up to 75 °C.
- The discs come wrapped in protective film. For quality checks or with frosted, engraved, or coated discs (MultiColor), the film is removed during production.
- **To keep the film from tearing on delicate engravings or thin edges, please peel it off nice and slow.**

Assembly Guide

To put your SunForm together, you'll need:

 a damp cloth.

Setting it up on the rod

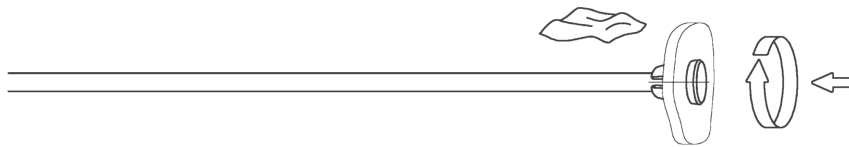

1.

Push the clip into the hole on the leaf from the top, leading with the slotted side.

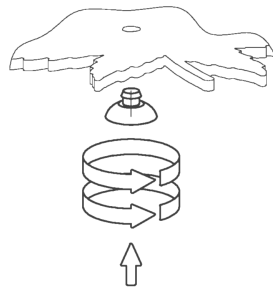

2.

Wet the rod a bit and slide or twist it into the open end of the clip until it hits the stop.

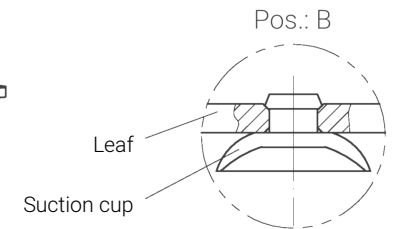

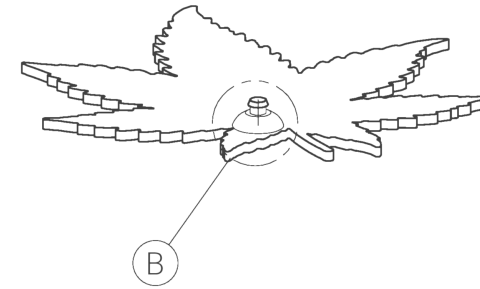

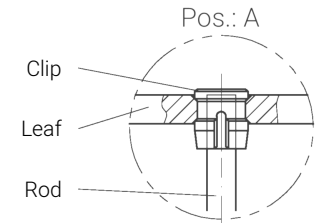

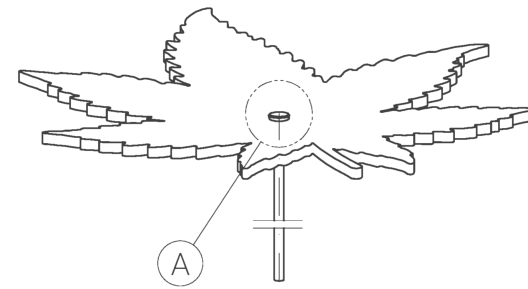

Mounting it with the suction cup

Moisten the suction cup and give it a twist with some light pressure until it's sitting flat against the surface.

Pro tip

Only twist it in **one direction (don't go back and forth)** until it fits into the indentation on the other side (check out sketch Pos.: B).

Setting it up

Sun catchers actually like shady spots best. So, it's better not to place your sun catcher in direct sunlight. In direct sun, everything looks so bright that your eyes can't really pick up the subtle differences in glow anymore.

You can just stick the swing rod for this SunForm straight into the ground. If the soil is hard and it's not too windy, about 8 cm is plenty. If the ground is soft or you're expecting some wind, aim for about 15 to 20 cm deep.

You can also use the suction cup to stick the leaf onto any smooth surface.

A quick heads-up

Suction cups don't stay stuck forever, even on smooth surfaces. Give it a check every now and then to make sure it's still holding tight, and press it back down if needed.

Tip

If your suction cup gets old and stiff, just pop it in boiling water for about a minute to make it soft and flexible again.
