

Cleaning

- You can just rinse off pollen, sand, and dust with some water (from a hose or watering can).
- For stubborn dirt, use a lint-free cloth or a soft sponge with plenty of water and a light touch.
- To get rid of really tough grime, use warm water and a bit of regular dish soap.

Stuff you should avoid:

- Don't rub your SunForm dry.
- Don't use any abrasive cleaners.
- Glass cleaners, solvents, and alcohol can damage the surface.
- Don't use a pressure washer.

Safety Instructions

SunForms aren't toys and aren't suitable for kids under 3.
The mounting kit might contain small parts - **choking hazard**.

If you use brute force (like bending it too much or hitting it hard), the plastic discs might break or splinter. Broken edges can be sharp or pointy and might cause cuts or stabs if you're not careful.

In that case, please wear proper gear (like safety goggles and gloves).

General Information

- SunForms are frost-proof and withstand temperatures up to 75 °C.
- The discs are delivered with protective films.

To prevent the protective film from tearing in delicately engraved areas and thin bridges, please peel it off as slowly as possible in those spots.

Assembly: Little Susi

95.03.514.00

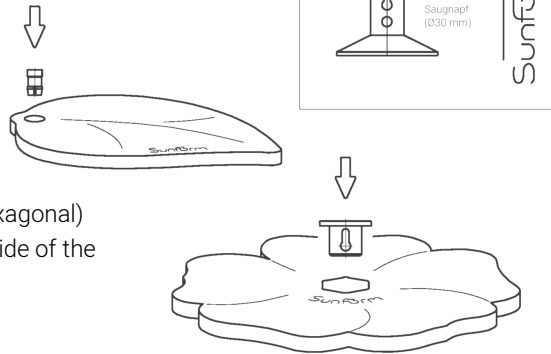

To assemble this SunForm, you will need:

A damp cloth.

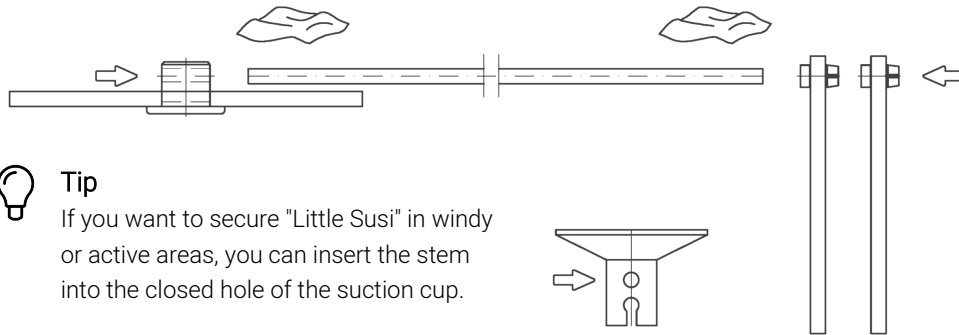

1.

Push the small green clips—slotted side first—into the mounting holes from the engraved side of the leaves. Then push the flower center into the (hexagonal) mounting hole, also from the engraved side of the flower.

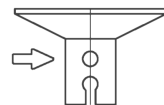

2.

Dampen the stem and push it vertically through the clips of both leaves using a twisting motion, one after the other. Now place the flower with the flower center onto the top of the stem in the same way, aligning it as desired (upright or horizontal).

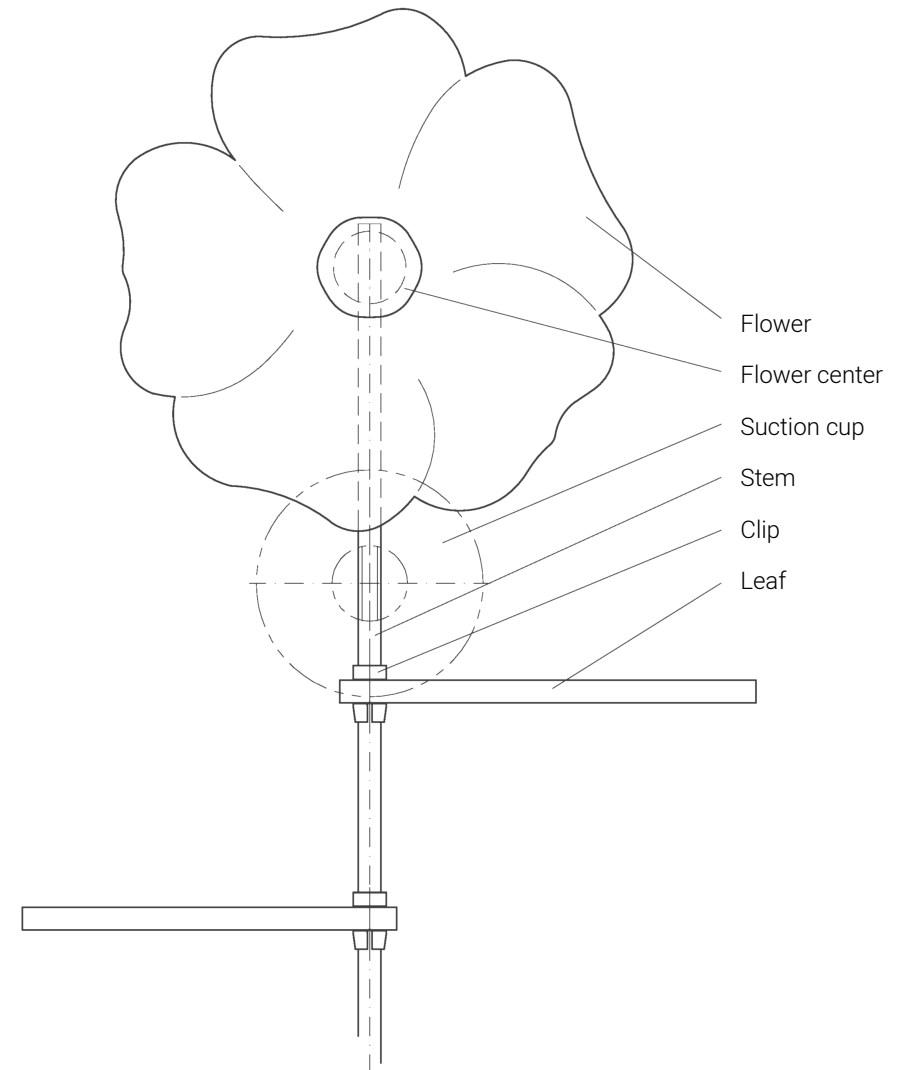

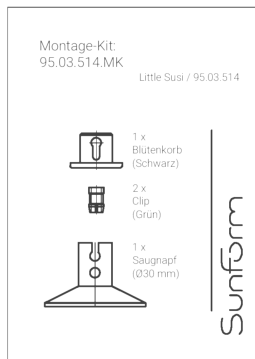

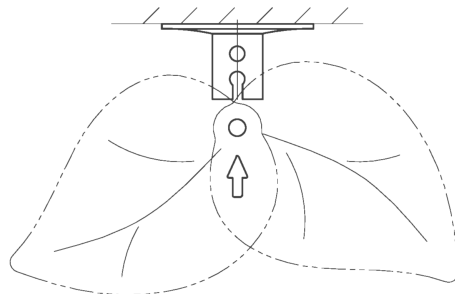

Tip

If you want to secure "Little Susi" in windy or active areas, you can insert the stem into the closed hole of the suction cup.

3.

Alternatively, if you have attached the suction cup to a smooth surface, you can simply press the stem into the slot of the suction cup.

Fastening

Using the suction cup, you can attach it to any smooth surface (e.g., windows, car windows, mirrors, glazed wall tiles, etc.).

A word of caution:

Suction cups usually only stick to smooth surfaces for a limited time. Please check the holding power regularly and press it firmly back into place if necessary.

Tip

To make old, hardened suction cups soft and pliable again, you can submerge them briefly (for about one minute) in boiling water.
