

Cleaning

- You can just rinse off pollen, sand, and dust with some water (from a hose or watering can).
- For stubborn dirt, use a lint-free cloth or a soft sponge with plenty of water and a light touch.
- To get rid of really tough grime, use warm water and a bit of regular dish soap.

Stuff you should avoid:

- Don't rub your SunForm dry.
- Don't use any abrasive cleaners.
- Glass cleaners, solvents, and alcohol can damage the surface.
- Don't use a pressure washer.

Safety Instructions

SunForms aren't toys and aren't suitable for kids under 3.
The mounting kit might contain small parts - **choking hazard**.

If you use brute force (like bending it too much or hitting it hard), the plastic discs might break or splinter. Broken edges can be sharp or pointy and might cause cuts or stabs if you're not careful. In that case, please wear proper gear (like safety goggles and gloves).

Scope of Delivery

- Bloom & Leaf
- Flower Basket (Pistil)
- Stem
- Connecting Elements
- Assembly Instructions

General Information

- Poppy is UV-resistant, weatherproof, and withstands temperatures up to 75 °C.
- The discs are delivered with protective films. During production, the discs are heated for bending; this may cause bubbles to form under the film. However, these bubbles are removed along with the film and have no impact on the quality of the discs.
- **Note:** To prevent the protective film from tearing in delicately engraved areas or on thin sections, please peel it off as slowly as possible.

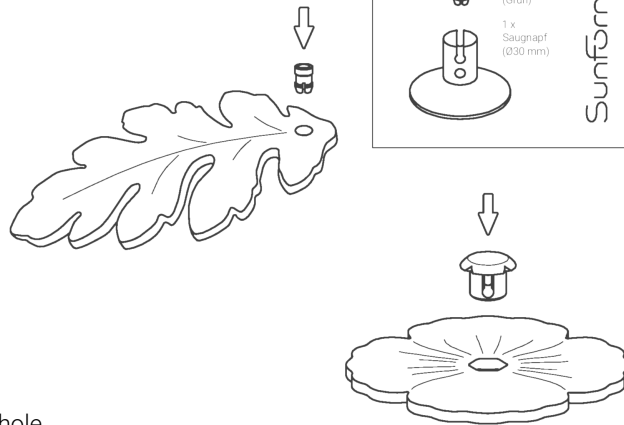

Assembly: Little Poppy

Product No: 95.03.539.00

You do not need any tools to assemble this SunForm.

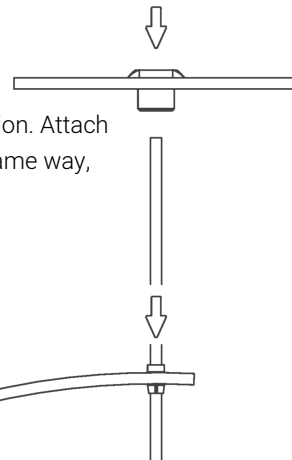

1.

Press the small green clip, slotted side first, into the round hole from the engraved side of the leaf. Then, press the black flower basket into the hexagonal hole, also starting from the engraved side of the bloom.

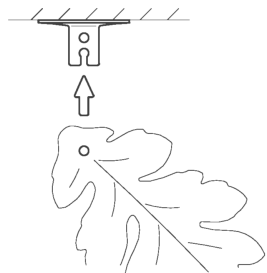

2.

Insert the stem through the leaf clip using a vertical, twisting motion. Attach the bloom (with the flower basket) to the top of the stem in the same way, choosing your preferred orientation (upright or tilted).

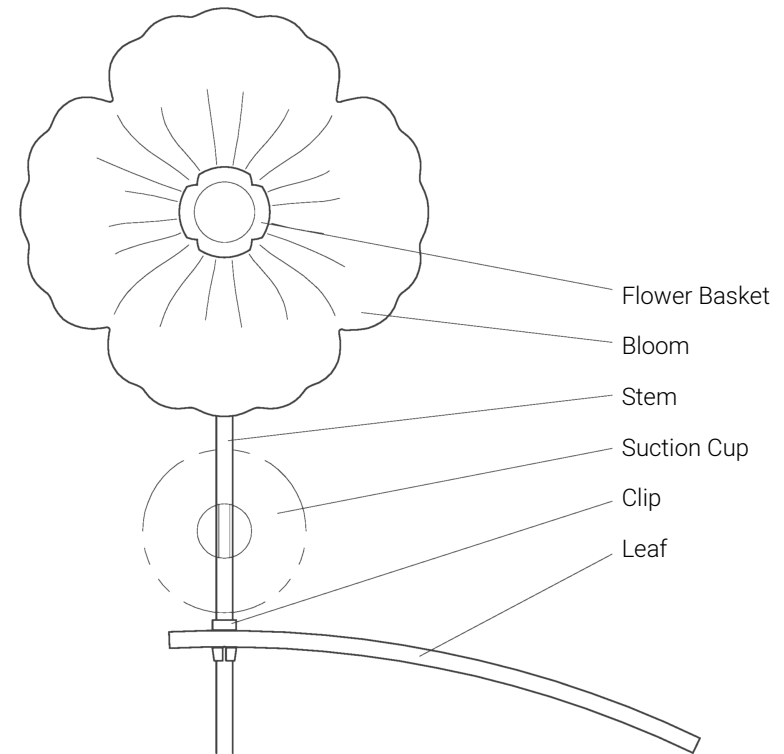

3.

Once you have attached the suction cup to a smooth surface, you can simply press the stem into the slot of the suction cup.

Pro Tip: 

If Poppy is intended to "bloom" in windy or high-movement areas, you can also insert her stem directly into the **closed hole** of the suction cup to provide extra stability.

Placement

Poppy loves daylight. However, she feels most at home in a **shady spot**. It is there that she can best showcase her glow—her true magic. While she is UV-stable and handles direct sunlight with ease, she only becomes the true "leading lady" in the shade. This is where you can best enjoy her vibrant colors, fine nuances, and the full brilliance of her luminescence.

Accessories

If you would prefer to "plant" Poppy in the ground or place her on a windowsill or desk, you can also use:

- **Ground Stake** (Item: 95.00.202.60)
- **Stand** (Item: 95.00.110.70)
